

### Client's requirements

Mr & Mrs Wakefield were building their new family home using a local builder. They had specific Audio Visual (AV) requirements and wished to 'future proof' their home for both Security & AV.

### Why they chose the Matters Group

Mr & Mrs Wakefield met with Rich from The Matters Group at a property which Matters had recently installed high level AV & security systems. This was an effective way for our client to get a real feel for the systems available. The demonstration enabled them to make an informed decision as to which systems would best suit their individual requirements. The true benefits of future proofing their new home were highlighted, ensuring their home technologically is relevant

### Benefits to the Client

Through consultation with the client we were able to design integrated systems to a reasonable budget which covered all of their current and future requirements.

### Matters Group Solution

- Full intruder alarm installation including interfaced smoke detection for off-site monitoring.
- Hard wired data network to provide internet access to all rooms and also Wireless access points in key positions to provide full coverage.
- HD TV distribution across Cat 6 structured cabling .
- Wiring structure and ceiling speakers for future integration with Nuvo or Sonos

*"With such an investment in building our own home it was necessary to ensure we installed the correct security and AV systems along with cabling to future proof our home. Matters demonstrated all the systems available and through budgeting all options advised on the correct cable structures and systems for our now and future needs. We were very impressed with their knowledge and open and honest approach."*
